

Eyenet Vision

Make People's Business Better

Version 2.23.1 | January 15, 2026

What is Eyenet Vision?

Eyenet Vision is smart camera software that helps businesses work better, safer, and smarter. It watches what's happening in your business and automatically does helpful things—like sending you alerts, counting people, or showing the right messages to customers at the right time.

The best part? Everything runs on your own computer. One simple subscription covers everything. No hidden fees from other companies. Your data stays with you.

Who Uses Eyenet Vision? Real Stories from Real Businesses

□ Warehouse & Distribution Centers

Meet Sarah, Warehouse Manager at a busy distribution center:

Sarah used to spend hours every week checking who showed up for work, writing reports about security incidents, and worrying about safety in the loading dock area.

Now with Eyenet Vision: - The system automatically tracks when workers arrive and leave—no more time cards to check - If someone goes into a restricted area, Sarah gets an instant text message - Safety alerts pop up on screens when forklifts are nearby - She can see exactly what happened during any incident by watching the video

Sarah says: *"It's like having an extra security guard who never sleeps, never takes breaks, and remembers everything. Just one simple subscription—no surprises!"*

□ Schools & Universities

Meet Principal Martinez at a large high school:

Principal Martinez worried about student safety, spent too much time on attendance reports, and never knew for sure if unauthorized visitors got into the building.

Now with Eyenet Vision: - Teachers don't spend 10 minutes taking attendance—it's automatic - Security gets alerts on their phones if someone enters after hours - They can see attendance patterns to catch problems early - During emergency drills, they know exactly who's still in the building

Principal Martinez says: *"Our teachers can focus on teaching instead of paperwork. And parents sleep better knowing we have better security—without making the school feel like a prison."*

□ Factories & Ships

Meet Captain Rodriguez, Safety Officer on cargo ships:

Captain Rodriguez had to ensure everyone was safe, track who was in dangerous areas, and meet strict safety regulations—all while managing a rotating crew.

Now with Eyenet Vision: - Automatic headcount when shifts change—no missed workers - Instant alerts if someone enters a hazardous area without proper gear - During emergency drills, they know immediately if everyone is accounted for - All safety incidents are automatically documented with video proof

Captain Rodriguez says: *"In my job, knowing where everyone is can mean the difference between life and death. This system gives me peace of mind and helps us pass every safety inspection."*

□ Retail Stores

Meet David, Small Boutique Owner:

David struggled to understand his customers. Were his window displays working? Did people actually look at the new products on the shelf? Why were some days busy and others dead?

Now with Eyenet Vision: - He knows exactly how many people visit his store each day - He can see which displays get the most attention - He knows the age and gender of his typical customers - He schedules staff based on actual traffic patterns, not guesses

David says: *"I used to think business decisions were mostly luck. Now I have actual data. I moved one product display and sales for that item went up 30%. I would never have known that without this system!"*

□ Stores with Digital Screens

Meet Lisa, Marketing Manager for a chain of phone stores:

Lisa spent thousands on digital advertising screens but had no idea if anyone actually looked at them. Plus, the same ads played to teenagers and seniors.

Now with Eyenet Vision: - Screens automatically show different ads based on who's standing in front of them - Teenagers see cool tech gadgets, seniors see easy-to-use phones - Lisa knows exactly how long people watch each ad - She can prove to her boss which marketing works and which doesn't

Lisa says: *"Our ads are actually relevant now. And when I can show my boss that our screen investment increased sales by 25%, getting budget for next year is easy!"*

□ Security Companies

Meet James, Owner of a private security firm:

James provided guards for 15 different buildings but couldn't be everywhere at once. He never knew for sure if his guards did their rounds, and clients sometimes complained about response times.

Now with Eyenet Vision: - He watches all 15 locations from one screen at his office - The system alerts him to problems before clients even notice - He can prove his guards did their rounds—with video timestamps - When something happens, guards arrive faster because they know exactly what's wrong

James says: *"I can cover twice as many clients with the same number of guards. The system catches problems my guards would have missed. And when I show clients the detailed reports, they never question my bill."*

How Does It Actually Help Your Business?

Save Money

- **One subscription covers everything**—no extra charges from third parties
- **Reduce staff costs** by automating repetitive tasks like attendance tracking
- **Prevent losses** by catching problems before they become expensive
- **Optimize scheduling** by knowing exactly when you need more staff

Work Smarter

- **Stop guessing** and start making decisions based on real data
- **Automate boring tasks** so your team can focus on important work
- **Get instant alerts** when something needs attention
- **See patterns** you never noticed before

Stay Safe

- **24/7 monitoring** that never gets tired or distracted
- **Instant notifications** when safety rules are broken
- **Complete video records** for insurance and investigations
- **Know exactly who is where** during emergencies

Grow Your Business

- **Start small** with just a few cameras and add more as you grow
 - **Works on regular computers**—no expensive servers needed
 - **Add features** as you need them
 - **Integrate** with your existing systems
-

What Makes Eyenet Vision Different?

Your Data Stays Yours

Your videos and information never leave your building. Everything stays on your own computer—no surprise charges from cloud companies.

Works Without Internet

Lost your internet connection? No problem. Eyenet Vision keeps working. You only need internet if you want to get alerts on your phone or send emails.

Affordable to Start

You can start with one or two cameras running on a regular business computer (the kind that costs \$500-1000). No expensive servers. No IT experts needed.

Grows With You

Start small and add cameras as you need them. The system automatically adjusts. Same software works for 2 cameras or 200 cameras.

Smart, Not Complicated

The system watches your cameras and automatically does helpful things: - Counts people - Detects when someone enters a restricted area - Recognizes age and gender for marketing - Tracks how long people spend in different areas - Sends alerts when something unusual happens

Common Questions

“Is this like those security systems at big companies?”

Sort of, but way more affordable. Big companies pay tens of thousands per month for enterprise systems. Eyenet Vision has one simple subscription that covers everything.

“Do I need to be a computer expert?”

No. If you can use a smartphone, you can use Eyenet Vision. Most people set it up in an afternoon.

“What about privacy? I don’t want my data in the cloud.”

That’s exactly why we built it this way! Everything stays on your computer in your building. You’re in complete control.

“How much does it cost?”

One simple subscription covers all the software and services—no hidden fees from other companies. Most small businesses pay less than the cost of one part-time employee.

“What if I’m not tech-savvy?”

The system is designed for business owners, not computer programmers. Plus, we provide remote support when you need help.

“Can it really run on my regular office computer?”

Yes! If your computer has 16GB of RAM (that’s pretty standard now), it can run Eyenet Vision. You might already have a computer that works.

Real Results from Real Businesses

Warehouse in Texas: - Saved 15 hours per week on attendance tracking - Reduced security incidents by 60% - Payback period: 4 months

Retail Store in California: - Increased sales by 22% after optimizing product placement - Reduced over-staffing costs by 30% - Payback period: 6 months

School in New York: - Saved teachers 2,500+ hours per year on attendance - Parents rated safety improvements at 95% satisfaction - Payback period: 1 semester

Security Company in Florida: - Added 8 new clients without hiring more guards - Reduced response times by 45% - Payback period: 3 months

Getting Started is Easy

Step 1: Start Small (Week 1)

Install 2-4 cameras in your most important areas. See how it works. Get comfortable with the system.

Step 2: Prove It Works (Months 1-3)

Use the system every day. Track the results. Calculate how much time and money you’re saving.

Step 3: Grow (Month 3+)

Add more cameras to other areas. Turn on more features. Connect it to your other business systems.

Step 4: Enjoy the Benefits

Relax knowing your business is running smarter, safer, and more efficiently.

The Bottom Line

Eyenet Vision makes your business better by: - Giving you information you never had before - Automating tasks that waste your time - Catching problems before they cost you money - Helping you make smarter decisions - Keeping your people safer - Growing with your business

One simple subscription. No hidden third-party fees. All on equipment you probably already own.

Want to Learn More?

Think about these questions: - What tasks do you wish happened automatically? - What information about your business do you wish you had? - What problems could you prevent if you knew about them sooner? - How much would you save with better scheduling and security?

If you're nodding your head to any of these, Eyenet Vision might be exactly what your business needs.

Making people's business better, one camera at a time.
