

EYENET

Core Functionalities & Features

Version 2.23.1 January 15, 2026 Confidential eyenet-vision.com

"Eyenet-vision puts the power of advanced computer vision to work for everyday people — whether you run a small shop, manage a building, or simply want a smarter, safer space."

Instead of passive cameras that only record, the platform *understands* what it sees and acts on it automatically:

- Count visitors so you know your busiest hours
- Alert you the moment something unusual happens
- Switch digital signs to show the right message at the right time
- Send notifications straight to your phone — all without storing a single frame in the cloud
- Everything runs locally on your own hardware, so your privacy stays intact and the system keeps working even if the internet goes down
- No per-camera licenses, no mandatory subscriptions, and no technical ceiling — it scales from a single camera at home to hundreds across a campus, adapting to the hardware you already have

"In short, Eyenet-vision turns ordinary cameras into an intelligent, always-on assistant that helps you make better decisions, respond faster, and operate more efficiently every single day."

How Eyenet Multiplies Human Operation Capacity

Boost Moderate Cameras to Powerful Machine Vision Nodes

- Turn any IP, WiFi, or mobile camera into an intelligent sensor — no specialised hardware required
- On-device AI processing: face detection, people counting, demographics, and route tracking in real time
- One platform. Unlimited cameras. Scale from a single lens to a facility-wide mesh

Track and Regulate Human Activity

- Real-time people tracking, counting, and attendance — replace badge systems and manual roll calls
- 3D route analysis and dwell-time mapping reveal bottlenecks, compliance gaps, and safety risks
- Automated shift reports, zone alerts, and occupancy limits — enforcement without extra personnel

Advanced Security — Real-Time Monitoring and Intelligent Threat Detection

Empower Your Digital Signage Solutions with Real-Time Vision Triggers

- Cameras read the room — age, gender, group size — and switch content in milliseconds
- Trigger playlists, promotions, or emergency messages automatically based on who's watching
- Measure every impression: views, dwell time, engagement rate — prove your signage ROI

Take Complete Control of Entrance and Exit Points

- Automatic headcount and identity awareness at every door, gate, and checkpoint — no queues, no badges
- Instant alerts when unauthorised access is detected or capacity limits are breached
- Full audit trail with timestamps, video evidence, and demographic logs for compliance reporting

Intelligent Access Control — Seamless Entry Management Powered by Vision AI

Cover Restricted Areas with Machine Vision Protective Nets

- Define virtual perimeters around any zone — machinery rooms, cargo holds, server racks — enforced 24/7 by AI
- Instant mobile and email alerts to supervisors the moment an unauthorised presence is detected
- Lone-worker monitoring, PPE compliance checks, and automatic incident documentation built in

Restricted Area Coverage — Automated Boundary Enforcement and Alerts

Protect VIPs with Instant Machine Vision Eyewear

- Instant face recognition and person-of-interest alerts streamed directly to security eyewear and mobile devices
- Known-face whitelists, threat watchlists, and real-time demographic profiling — all on-premises, all private
- Parallel multi-camera detection across an entire venue, coordinated through a single command dashboard

Take Full Operational Control Remotely — Even with a Single Mobile Phone

- Secure VPN-powered remote access to every camera, trigger, and dashboard from anywhere in the world
- Mobile app with live feeds, push alerts, and full configuration control — manage an entire site from your pocket
- Zero cloud dependency for video and data — your footage never leaves your premises, even when you do

Remote Operations — Full Platform Control from Anywhere in the World

Get Started Instantly Using Everyday Hardware

- 16 GB of RAM and a modern CPU — that's all. No GPU servers, no cloud subscriptions, no vendor lock-in
- Plug in any IP camera, WiFi cam, or just open the app on your phone — your first detection runs in minutes
- Start with one camera and one room; scale to hundreds of cameras across multiple sites when you're ready

Instant Deployment — Up and Running in Minutes, Not Months

Key Differentiators

✓ **Privacy-First**

All processing and storage on-premises

✓ **Offline-Capable**

Full functionality without internet

✓ **Infinitely Scalable**

From single camera to enterprise-wide

✓ **Secure by Design**

Encrypted, access-controlled, VPN-ready

✓ **Integration-Ready**

REST APIs, webhooks, third-party connectors

✓ **Support-Friendly**

Remote diagnostics without compromising security

✓ **Event-Driven Intelligence**

Automated actions based on real-time vision analytics

✓ **Per-Camera Automation**

Independent trigger configuration for each camera

✓ **Multi-Action Orchestration**

Complex workflows with multiple notification channels and integrations

1. Computer Vision & People Analytics

People Tracking & Analysis

- Real-time people tracking and identification
- Accurate counting and attendance monitoring
- 3D route tracking and movement analysis
- Demographic analysis (age, gender, etc.)

2. Camera & Hardware Integration

Multi-Source Camera Support

- Traditional IP / network cameras
- WiFi-enabled cameras
- Soft cameras via mobile applications
- Comprehensive camera health monitoring

3. Intelligent Triggers & Automated Actions

Event-Driven Automation

- **Camera-Level Trigger Configuration** — Each camera can be independently configured with custom triggers based on machine vision events
- **Real-Time Event Detection** — Automatic detection of configurable events (person count thresholds, demographics, dwell time, velocity, direction, etc.)
- **Complex Condition Logic** — Support for multiple conditions with AND/OR operators for sophisticated trigger rules

Automated Action Execution

Multi-Channel Notifications

- Mobile push notifications
- In-app alerts
- Email notifications
- SMS alerts (via integrations)

System Integrations

- **Digital Signage Integration** — Automatic content switching on connected displays based on audience demographics or behaviors
- **Third-Party Application Triggers** — Webhook-based actions to external systems (access control, lighting, HVAC, etc.)
- **Custom Workflows** — Programmable action chains for complex automation scenarios

4. Video & Data Management

Storage & Processing

- Local video storage and management
- No cloud services required for video / data storage
- Full operational capability without internet connectivity
- Minimal internet access needed only for remote notifications and email

5. Intelligent Communications

Multi-Channel Notification System

- Mobile push notifications
- In-app alerts and warnings
- Email notifications
- Automatic integrations with third-party applications
- Webhook support for custom workflows
- Audit logging of all communications with delivery tracking

6. Analytics & Insights

Data Intelligence

- Real-time analytics dashboards
- Historical trend analysis
- Behavioral pattern recognition
- Actionable insights and reporting
- Trigger performance analytics
- Action execution monitoring and statistics

7. Deployment Architecture

Local & Edge Installation

- Complete on-premises deployment
- No dependency on cloud services
- Edge computing architecture for data privacy
- Internet connectivity optional (required only for remote features)

Microservices Design

- Modular microservices architecture with separation of concerns
- Independent service scaling and maintenance
- Automatic service discovery and health monitoring
- Environment-aware installations for remote operation tracking

8. Security & Access Control

Enterprise-Grade Security

- Comprehensive user access management with role-based permissions
- File-level encryption for sensitive data
- Optional private VPN for internet communications
- Complete data sovereignty (all data stays on-premises)
- Secure trigger and action configuration with user audit trails

9. Scalability & Expandability

Flexible Scaling

- Scales from small installations (homes) to large industrial sites
- Hardware-based scalability (software adapts automatically)
- Performance scales with available hardware resources
- No architectural limits on deployment size
- Unlimited camera support based on hardware capacity

Integration & Extensibility

- Third-party software connectivity via REST APIs
- Standard webhook integrations for custom actions
- Custom integration support
- Modular plugin architecture
- Digital signage system integrations (standalone and networked displays)

10. Support & Monitoring

Remote Support Capabilities

- Remote diagnostic and troubleshooting tools
- Centralized logging and monitoring
- Installation identification for multi-tenant support
- Comprehensive audit trails for compliance
- Trigger execution monitoring and debugging
- Action delivery tracking and failure analysis

Technical Architecture Highlights

Trigger & Action System

- **Granular Configuration** — Each camera operates independently with its own trigger rules
- **Real-Time Processing** — Instant evaluation of machine vision events against trigger conditions
- **Reliable Delivery** — Communication service ensures action execution with retry logic and failure tracking
- **Comprehensive Logging** — Full audit trail of trigger activations and action executions with multi-tenant support

Operational Environment Awareness

- **Context-Aware Triggers** — Conditions based on time of day, day of week, occupancy levels, demographics
- **Behavioral Pattern Recognition** — Triggers based on velocity, direction, dwell time, and trajectory
- **Historical Comparison** — Trigger conditions comparing current vs. historical averages
- **Multi-Camera Correlation** — Cross-camera triggers for tracking across multiple zones

Digital Signage Integration

- **Dynamic Content Switching** — Automatic display content changes based on audience detection
- **Demographic-Based Targeting** — Show relevant content based on detected age, gender demographics
- **Occupancy-Aware Display** — Adjust content based on crowd size and engagement metrics
- **Playlist Automation** — Intelligent scheduling based on real-time analytics

Addendum

Eyenet in Action — Platform Screenshots

Main Dashboard

Central control panel with real-time overview of all cameras and alerts

Analytics Filters

Flexible data filtering options for targeted insights and custom reports

System Settings

Full platform configuration with environment, network, and security preferences

Analytics Dashboard

Comprehensive analytics with historical trends and real-time insights

Detection Analytics

Advanced detection metrics with demographic breakdowns and patterns

Camera Management

Manage all connected cameras with health status and configuration

Triggers Management

Configure and monitor automated trigger rules across cameras

Actions Editor

Define automated actions with multi-channel notifications and integrations

Digital Signage

Manage signage content with vision-triggered playlist switching

MVR Group Details

Detailed recording group configuration and playback management

Media Upload

Upload and manage video content for analysis and signage distribution

Signage Android App

Dedicated signage player app for Android-powered displays
